

### 3.3 Easy Reconfiguration and Self-organization

Technology professionals are made these things easy to use. They have designed these devices to be easily manipulated and reconfigured by the medical professionals or the person using it. Designs may depend upon the data that will be required for medial analysis.

## 4 Conclusion

The emergence of wireless technology has certainly made things a lot easier than before. More and more medical technological devices are being invented every year in order to improve the healthcare services industry and to provide quality services for the maintenance, improvement and restoration of customer-patient's health. At present, some researchers are dealing with ubiquitous systems for healthcare.
